TECHNICAL PROJECTS

Go Park - [Github](#) | [Demo](#)

February 2020

Inform Park near the DMV areas and keep tracking which Park you have been

- Fetch "Park API" back-end(Ruby on Rails) and use API front end(Redux, React) / Stylish(CSS, Bootstrap)
- Avail log in / sign up and check the validation of ID and Password
- Search specific park that user want to find on the main page
- Show events, map, and direction on each detail page
- Click the visit button, the user will see the park on the profile that the user clicked visit button
- Choose the visited date on the calendar and leave the comment about the park

Harry Potter - [Github](#) | [Demo](#)

January 2020

Inform Harry Potter's characters, spells, and the user can add their favorite

- Fetch Harry Potter's API back-end(Ruby on Rails) and use API front end(React) / Stylish(Semantic)
- Created User ID where the user will be assigned one of the houses randomly
- Show all characters and search them. Add favorite characters if users like
- Show all spells and add favorite if users like
- See all of the favorite characters, spells on other page and delete if user do not like anymore

Flazon [Github](#) | [Demo](#)

December 2019

Sell products and the user can buy items

- Used Ruby, Ruby on Rails, bootstrap4, HTML5
- Click sign up / log on the main page for buying items / Search items, so the user can find an item quickly
- Look up all items or sort by categories and save shopping cart items to buy at one time

Recipe Blog - [Github](#) | [Demo](#)

June 2019 – July 2019

Share user's recipe and tips for cooking

- Used HTML, JavaScript, CSS, PHP, PHPMyAdmin
- Sign up / Login (or guest) on the welcome page to get into the main page
- Forget ID/Password will send user's email with temporary hashing password
- Example food will link to YouTube on a new webpage and share user's recipes and tips and tricks
